

Skånska Lantmännen

Using PlanLogiX for animal food distribution integrated with Movex ERP system

A complex planning problem

Skånska Lantmännen is one of Skånes (southern Sweden) largest industrial companies with over 700 employees. Local farmers own Skånska Lantmännen and the company supplies products and services to plant growers as well as animal production.

DPS construction of a custom build map form the solution base for Skånska Lantmännen.

DPS solutions have been used since 1995 for the operational planning of forage distribution in Skåne. The first implementation was with FAS, a custom built ERP system and a bespoke version of PlanLogiX in DOS environment. The bespoke development became later the standard product of DPS and allowed enhanced graphical map presentations of product types. Another part of the first phase was the development of a detailed map of southern Sweden containing roads to all farms in the district.

Change of ERP system to Movex

The second phase in development was to use WinLogiX together with FAS, which later was changed to Movex from Intenia. The implementation of Movex at Skånska Lantmännen allowed more information to be sent to PlanLogiX. The planner was presented with detailed information of the delivery presented in PlanLogiX route planning and optimisation system.

Detailed information is supplied with each transport order.

In the end of the 90's **Schenker BTL** and **Skånska Lantmännen** formed **LIAB**, which is a joint venture company for distribution solutions to the agricultural industry sector. LIAB acquired the existing route planning and optimisation system and is now the user of the DPS solution.

PlanLogiX allows detailed route planning.

Skilled specialists in route planning and the productions structure of Skånska Lantmännen use PlanLogiX. Special consideration needs to be taken on the vehicle situation, which consists of custom built bulk vehicles.
