

Society Paid Travel Service

PlanLogiX: Cost efficient with full consideration to traveller service.

Optimising student transportation in Copenhagen

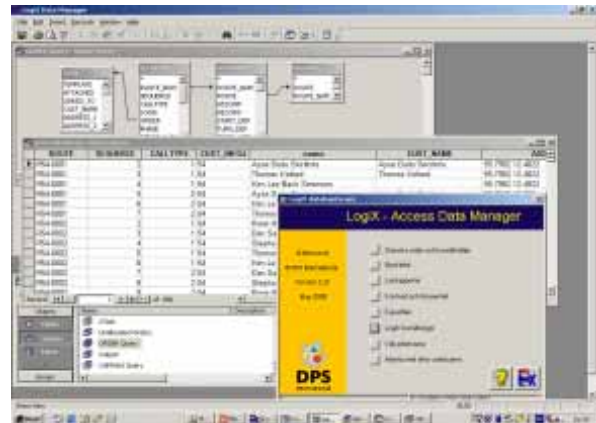

Taxi vehicles are used to transport over 10.000 students in the Copenhagen area to 46 special schools. This is a complex planning operation with a high impact from time constraints. PlanLogiX allows optimisation of the total transport situation in the area.

Address information is used to geocode each student.

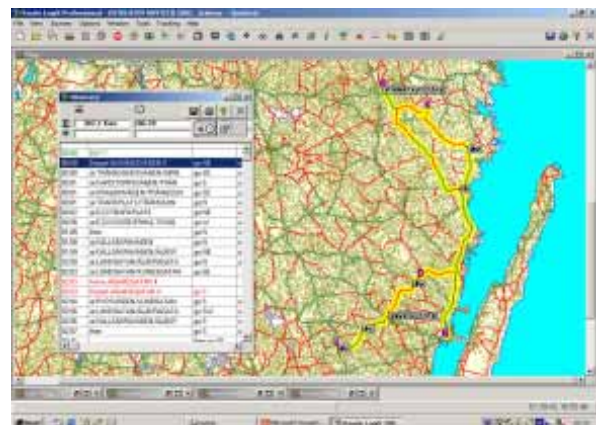

A detailed road database from Kampsax Geoplan gives exact travelling times as well as detailed driving instructions.

The MS Access tool LogiXdbf gives the opportunity to create custom made reports that reflects the actual economic impact on the routes to the taxi price structure.

Optimising transports to hospitals in the region of Kalmar, Sweden

Kalmar Läns Beställningscentral uses a custom built order handling system to plan transport to hospitals and health centres in the district. DPS route planning and optimisation tools are integrated into the system and allow the planner to build economic route with full consideration of each patient's specific need.

Road data from Navigation Technologies gives best possible distance quality for invoicing purposes.
